Health Department Recommendation:

- Approved Denied
- Approved w/Conditions (Please attach a copy)

Health Department Authorized Signature/Date

Drinking Water Source Protection **Review of Applications Chapter 9.25.110**

A. Restricted Use — a restricted use poses some risk of causing pollution or potential contamination in a specified protection zone. Following preliminary staff review of the application, the Planning & Development Services Division will request a *Verification of Compliance* from the SLCHD **and** from the appropriate public water system. The applicant *shall* submit to the appropriate water system the best management practices **and** engineered and/or construction controls **or** land management strategy to be implemented.

Upon acceptance and approval, the appropriate public water system must issue a recommendation letter to the SLCHD listing the best management practices, engineered and/or construction controls, or land management strategy to be implemented as part of the recommendation.

Any engineered and/or construction controls must be illustrated on the site plan or construction drawings. A public water system *shall* respond to an applicant's best management practices, engineered and/or construction controls, or land management strategy within 45 days of submission.

IF a public water system does not approve of the best management practices, engineered and/or construction controls, or land management strategy submitted by the applicant, *OR* cannot come to an agreement on issue, the public water system will submit the reason that the approval is not given and provide recommendations for additions or changes.

The recommendation *must* comply with this ordinance and any applicable SLCHD health regulations.

The SLCHD *shall* review all recommendations received and *specify* the condition of any approval *before* the approval to the Planning and Development Services Division.

Challenges to the best management practices, engineered and/or construction controls, or land management strategy *may be appealed* as provided for in Section 9.25.130. The Division of Drinking Water may assist the SLCHD in the resolution of an appeal challenging the recommendations of a public water system.

NO permits or land use approvals including, but not limited to, a subdivision approval, conditional or permitted use approval, business license or building permit, shall be issued until such appeal has been resolved.

B. Prohibited Use — a prohibited use poses a very high risk of causing pollution or potential contamination in the specified source protection zone. An application received by the Planning & Development Services Division for *any* permits to land use approvals including, but not limited to, a subdivision approval, conditional or permitted use approval, business license or building permit in a zone designated as prohibited, *shall be denied*.

Work with the public water system in the specified source protection zone to implement an acceptable engineered and/or construction control or land management strategy;

IF a denial is based on a prohibited use designation listed on the matrix within a specified source protection zone, the applicant may appeal the denial to the SLCHD. The Division of Drinking Water may assist the SLCHD, public water system, and applicant in the resolution of any appeal challenging a prohibited use.

Every applicant having received a land use approval in accordance with this title shall re-submit to the responsible Public Water System their Best Management Practices whenever significant changes or modifications are made or once every three years. Failure to do so may result in revocation of the land use permit.
